

As a leading energy and home services company, NRG's efforts to unleash innovative solutions to combat climate change are aligned with our vision for a smarter, cleaner, and more connected future. To that end, we are committed to:

- Achieving our science-based targets to reduce operational greenhouse gas emissions by 50% by 2025 from our current 2014 base year and achieve net-zero by 2050
- Achieving 100% electrification of our light-duty vehicle fleet by 2030
- Providing sustainable energy products and solutions that help our customers meet their needs and expectations, including meeting their sustainability goals
- Advocating for residential customer choice to facilitate demand for lower carbon energy products and services
- Advancing resilience through assessing and planning for potential climate change impacts on our business
- Ensuring our Board of Directors remains well-versed in leading climate competencies and governance practices
- Engaging proactively with investors and other key stakeholders on topics such as governance or disclosure expectations
- Reporting our impact and progress using leading sustainability disclosure frameworks and standards

Clear policy signals can help drive private sector actions and investments that accelerate the transition to a low-carbon economy. To that end, NRG supports policies on climate change that:

- Align with the ambition of the Paris Agreement
- Promote competitive, market-based solutions
- Are technology-neutral rather than fuel or decarbonization pathway-specific
- Focus on minimizing carbon dioxide equivalent emissions at the lowest cost
- Address both stationary and mobile sources of GHG emissions on an economy-wide rather than a sectoral basis
- Provide long-term predictability to spur private investment in innovative technologies and business models
- Complement existing voluntary corporate actions and commitments to reduce emissions from their operations and value chains
- Put an economy-wide price on carbon which is based on greenhouse gas emissions and is technology-neutral
